## Equine On-site Testing Case

Equine on-site testing case is a combination of 10 different integrated rapid tests for diagnosing equine diseases. It is designed for regular examination for horses. All the test results could be interpreted with our FIC-Q100N Dry Immunoassay Analyzer. A testing report could be generated in the system, and results could be stored as clinical histories for veterinarians to review. The case and the analyzer provide an efficient solution for on-site testing to horses.

Items	Quantity
Equine Influenza Antigen Test	2
Equine Rotavirus Antigen Test	2
Equine Clostridium perfringens Antigen Test	2
Equine Salmonella spp. Antigen Rapid Test	2
Equine Cryptosporidium Antigen Test	2
Equine Coronavirus Antigen Test	2
Equine Infectious Anemia Virus Antibody Test	2
Equine Theileriosis Antibody Test	2
Equine Ehrlichia Antibody Test	2
10-100µl pipette tip	20
Tube holder	3
Coagulation tube	8
Pipette (range: 10~100ul)	1

## Applications

For veterinary clinic use

Served as on-site inspection tool at Customs when importing horses

Served as regular diseases monitoring system at horse ranch

Served as an on-site screening system at racing club
