Equine On-site Testing Case

Introduction

Equine on-site testing case is a combination of 10 different integrated rapid tests for diagnosing equine diseases. It is designed for regular examination for horses. All the test results can be interpreted with our FIC-Q100N Dry Immunoassay Analyzer. A testing report can be generated in the system, and results could be stored as clinical histories for veterinarians to review. The case and the analyzer provide an efficient solution for on-site testing to horses.

Applications

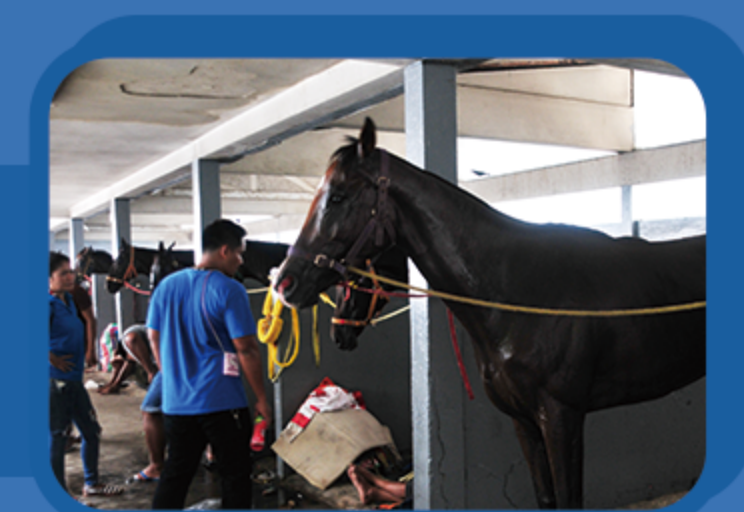

For veterinary clinic use

Served as an on-site screening system at racing club

Served as on-site inspection tool at Customs when importing horses

Served as regular diseases monitoring system at horse ranch
